Job Description

Bross Group is seeking a Cold Fusion Web Developer to join our client's Information Technology Team developing state-of-the-art web applications. Our client is a rapidly growing internet company in the healthcare industry. They offer a casual work environment with an outstanding benefits package.

Responsibilities

Develop and maintain Cold Fusion Web Applications to support corporate products and services:

- Responsible for the design, development, and maintenance of several web applications and other systems.
- Performs requirements analysis, functional and technical design, application development, and configuration management tasks.
- Works with internal users to identify system requirements and resolve issues.
- Creates and maintains technical and business documentation.
- Participate collaboratively with project team members and product owners.
- Must be able to work individually and in a team environment.

Required Skills

- 5 to 7 years web development experience required.
- 3 to 5 years of Cold Fusion Development experience required.
- Strong CSS and JavaScript experience is required.
- .Net and C# Web Development experience is highly desirable.
- Experience with Visual Studio Team Systems & Source Control
- Excellent understanding of software development methodologies.
- Agile development experience preferred.
- Strong interpersonal and communication skills.
- Strong problem solving and decision making skills.
- Able to bring multiple, concurrent projects to successful completion.
- Content Management and Internet advertizing experience is highly desirable.
- Bachelor's Degree, or 4 years of equivalent experience required.

All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin. US citizens and Green Card Holders and those authorized to work in the US are encouraged to apply. We are unable to sponsor H1b candidates at this time.
